IGGY POP –
Live In San Francisco 1981

You can get this as a DVD so let's begin by saying I recommend that - even though the video is minimal the performance and the clothing are classic. This CD features 2 unreleased tracks produced by Cars legend (at least in Boston) Ric Ocasek in 1983 and that may be a reason for Iggy completists like me to buy this (but I didn't). And that's really it except that the CD is screwed up not giving you the cuts as listed. After track 5, track 6 begins the show all over again instead of "Bang Bang." Then all is as listed on tracks 13 and 14 which are the unreleased ones "Fire Engine" and "Warrior Tribe". Neither song is more than a B side with "Warrior Tribe" being the better to me. If the CD wasn't more than an afterthought to whomever put together the master (unless press copies are intentionally defective). – KZ
