Title: **Night of the Living Dead: Reanimated (2009) movie review.**

Post by: **MikeEllis** on **November 03, 2010, 12:11:00 PM**

This is a weird film, it's actually the soundtrack of the NOTLD soundtrack and audio with all of the visual redone as animation. This would be pretty cool if they didn't keep changing the animation style every few minutes or seconds. It actually runs through all the styles by different artists, there is everything from stick figures, claymation, robot chicken style barbie doll stop motion, charcoal, line drawing, magna style, CGI, and what I'm pretty sure was either My Sims or the Quake engine or maybe both. If you watch it I'm sure someone will recognize the crowbar and let me know.

It's actually pretty amazing and annoying at the same time, some of the animation is so bad you can't tell what is going on on screen, some of it is so detailed it looks like a Norman Rockwell still life. I think my favorite part was when it went to a screen from a game like you would have seen on an Atari 800. Status: Boarded up pretty well now. Action: Talk to.

If you are a purists, you will probably not like this interpretation of the work, it balances on a fine line of annoying and amusing for a lot of the film. I would recommend renting unless you are the kind of person that has to have everything with NOTLD on it.

Is it using the original or the Romero remake?

The original has great atmosphere with the B&W, but I like the plotline in the remake better.

I'm pretty sure it's the original soundtrack, if only because it's public domain and they would not have had to pay royalties on it to use it. You do notice the soundtrack and the ambiance a lot more with this version. I mean while not watching the scenes with muppets or sock puppets anyway. I think it would have been better as a set of artists doing still drawings of the movie scenes.
