CELEBRATING THE ICONS OF POP CULTURE

## **“MOLD!”**

This 2011 sci-fi/horror flick, set in that dreaded year, 1984, offers gore and more. It opens with none other than Ronald Reagan talking to Americans about the greatest horror of all - drugs! Think cocaine and crack have nightmarish repercussions? Wait'll you see what results from a strain of mold designed to wipe out the drugs. And the spores are spreading throughout the research facility! Arrrrgh!!! There's a bit of the paranoid feel of Howard Hawks' "The Thing!" Well directed and edited by Neil Meschino, "Mold!" is appropriately gruesome, with some welcome satirical touches. Special effects makeup is quite good, considering the minimal budget. Campy, gory fun. Director's commentary and a behind-the-scenes short are among the new DVD release's extras.
