Rating: 5 stars!

I won't beat around the bush here, the band, the music & the entire concept is a playful take on what The Misfits made a career out of...50's inspired 3 chord punk rock with full on horror themes in every song & every title.

The singers vocals sound amateur & he reminds me of Jerry Only singing; I guess it is what it is, the music is just fast & no song is very long time wise with each song being just around 2 minutes give or take.

Songs about monsters, the number 13, spiders, death & creepy things...that's the premise of this band & they do the sci-fi horror punk thing well; it's got to be a nice feeling for Glenn Danzig to know he's influenced so many bands with a concept that he created back when he was still a kid for the most part!

For the most part, much like The Misfits, every song kinda blends one into the other & each song fills the same void of fast horror punk riffs with lo-fi vocals.

This is a fun band to check out & if you like The Misfits then it's a no brainer that you'll dig this band 100%!
