QUEEN  
Under Review 1973-1980  
MVD

Queen is arguably one of the best bands of all time, so I was pretty excited when I got this DVD to check out. I am a huge fan of Queen but this just seemed more like something I would watch on PBS. That's not to say this wasn't good, but I can see why Queen isn't associated with this. In my own opinion there just wasn't enough of the music in the DVD and that's what truly makes Queen so great isn't it? There were clips but full performances of the songs were lacking. I like the stories that were told, much like I am into all of the Behind The Music's on VH1, but the guitar guy that showed how Brian May made his guitar sound the way he did and took up a lot of time doing it... hmhhh yeah I could have done without that. There were a lot of clips of great tunes from rare performances on the DVD and that was worth the price of admission. My personal faves were all here ranging from Stone Cold Crazy to We Are The Champions, and while most of the songs were on here, a notable one missing from the DVD was Fat Bottom Girls. Overall if you're a fan of Queen then this is a must have for your collection, if you aren't already a fan but want to check out great music I'd say to look at either of the Greatest Video Hits DVD's instead.
