It's hard to say what's more shocking about *Hated - GG Allin And The Murder Junkies*, the endless shots of naked men shitting and being shat on, drinking piss and generally getting quite filthy, or the fact that this exceptional film was made by Todd Phillips, who would later go on to make *Road Trip* and *Starsky And Hutch*.

Sure, *Road Trip* had plenty of jokes about the bodily fluids and the sexing, but did it have a bloke lying on his back whilst a naked woman pisses into his mouth, and then the fella on the floor pukes all over his face, before reaching up for another mouthful? Did Ben Fokker from *Starsky And Hutch* take a shit and then lie down, eat some of it, and smear the rest over his head?

Maybe in that Unrated Directors Cut, but certainly not in the one I saw in cinemas.

A couple days ago The Duke watched a concert video by the name of

GG Allin - Raw, Brutal, Rough And Bloody. If you read my fucking astoundingly incisive critique of that particular product, you may have noted how humorous I found much of to be, how fascinated I was by the disgusting shenanigans going on in the name of God Awful Music.

After finally seeing this documentary about the man in question, I have to say the fascination is still there. The humour, though, I can't seem to find that motherfucker anywhere right about now.

What *Hated* concerns itself with, is Todd Phillips decided to make a film about these insane motherfuckers who were addicted to the murder or whatever. The fellas that had GG Allin for a singer.

GG had just been released from prison after a three-year stint for the assault of a woman at one of his shows, when he assumed it might be perfectly acceptable for to shove a cigarette into her face and then fling her across a table.

I mean come on, GG probably thought. Rod Stewart does it all the time. man.
