This is basically a re-release of what some consider a prog metal classic and I was pretty damn impressed. This is yet another band I had not discovered before. It's amazing what kind of gems come across my desk for me to open up and put into the old CD player. I have to think Clive Weiler at the MVD for opening me up to some new music. A lot of the new stuff on the market can be a bit staid and boring so sometimes it's pleasant to discover some great music from the past. These guys are definitely a classic example of innovative and original music that probably influenced a lot of people who followed. While the vocals are powerful and amazing it's the musicianship that really stands out to me the most. There are so many songs on this record that are amazing. I highly recommend searching this release out and buying it.
