MARILLION – “Somewhere In London” double DVD

When this came our way a while back we were definitely curious but due to the various crisis of the past year kept us from really watching this to review it; thus it ended up in the backlog until now. The first disc of this two DVD set is live footage of this veteran British progressive rock band from two concerts in London in June 2007. Shot in more than vivid color with multiple cameras, the imagery highlights the show from various vantage points both on stage and in the crowd. The crisp, clear audio perfectly frame the textures in the keyboards, tasty guitar tones and the sometimes lush arrangements in full glory whether a delicate ballad or a rousing rocker. The second disc features footage from earlier in the tour (I think), rehearsal footage, and 5.1 mixes of several songs from their *Somewhere Else* album. The overall feel is a vibrant, sometimes surprising show that warrants several viewings to find new things here. I will totally recommend this DVD to those readers who heave leanings towards checking out prog rock.
